

Research needs expressed in the Decisions of the Conference of the Parties to the Convention on Biological Diversity: Cross-Cutting Issue: Gender and Biodiversity

The importance of biodiversity to individuals varies according to gender (<http://www.cbd.int/gender/>). Based upon the social roles of and power relations between men and women, gender is shaped by culture, social relations, and natural environments. For this reason, gender dimensions need to be incorporated into the understanding of biodiversity and its conservation, sustainable use and the sharing of benefits. CBD developed a Gender Plan of Action in 2008.

The cited Decisions that express research needs are XII/7 and XIV/18, also checked was X/19.

Direct research needs

Decision	Paragraph	Chapeau / Heading	Text	Source
